

# Delivering Statistical Expertise to Epidemiology

Obtaining statistical expertise is essential when you need to **make the most of your observational data**, whether for regulatory purposes, marketing publications, or reimbursement dossiers.

We bring the robustness of our strong clinical development experience to the design & analysis of your epidemiological study, along with the skills, imagination & flexibility needed to maximise your data's potential.

- How do I design a registry study?
- How can I analyse treatment switchers?
- How do I evaluate comparative effectiveness when randomisation isn't possible?
- What are the potential biases in my open-label study?

From initial design to final analysis and beyond, we help turn your epidemiological ideas into statistical reality.

## Numerus will deliver

Numerus fully understands that you need timely answers to your questions – we help achieve this via rapid, interactive data visualisation.

Get the expertise your data demands
